EDUCATION

Ph.D. in Network Security

University of Edinburgh, Edinburgh, UK

School of Informatics

Supervisor: Michio Honda

Thesis: Towards Fast, Secure, and Privacy-preserving Networking

2021 - May 2026 (expected)

M.S. in Cyberspace Security

Nanjing University of Aeronautics and Astronautics, Nanjing, China

College of Computer Science and Technology

Supervisor: Zhe Liu

Thesis: Towards Secure Data Sharing in Internet of Things Based on Blockchain

2017 - 2020

Outstanding dissertation

B.S. in Computer Science

Nanjing University of Aeronautics and Astronautics, Nanjing, China

College of Computer Science and Technology

Thesis: An Efficient and Secure Ridge Regression Outsourcing Scheme for Wearable Devices

2013 - 2017

SELECTED RESEARCH PROJECTS

Looma: A Low-Latency PQTLS Authentication Architecture for Cloud Applications NDSS'26 (Major Revision)

Looma re-architects PQTLS authentication to support fast mutual TLS handshake at datacenter scale. It achieves this by decoupling costly authentication operation from the latency-critical handshake path, enabling the handshake to use lightweight online signing/verification.

Designing Transport-Level Encryption for Datacenter Networks S&P'26

SMT integrates TLS-based encryption with message-oriented datacenter transports like NDP and Homa to provide secure, efficient RPC communication. It introduces per-message sequence spaces and unique message identities to prevent replay attacks while leveraging existing NIC TLS offloads.

Defending against Malicious Mixes with Topological Engineering ACSAC'22

This work enhances user anonymity in stratified Mixnets by addressing real-world vulnerabilities such as relay sampling, topology placement, and network churn that existing designs overlook. It introduces an engineered guard layer and client guard logic—adapting Tor’s guard concept—to resist long-term deanonymization attacks.

RESEARCH EXPERIENCE

Research Intern, Singapore University of Technology and Design (SUTD), Singapore

Feb 2019 – May 2019

Advisor: Dr. Paweł Szalachowski

Focus: Security Analysis of PoW Consensus algorithm by utilizing Markov Decision Process (MDP) to model the adversary’s behaviour in order to find the optimal Selfish Mining Attack Strategy.

POSTER & TALKS

1. Towards Fast Mutual PQTLS Handshake in Datacenters
Coseners, UK Academic Meeting on Systems and Networks,
Abingdon, UK July 2025.
2. AUTONOMY: Auto-adaptive Well-behaved Anonymous Communication Systems
PoPETS'22 Workshop on Interdependent and Multi-party Privacy (IDP),
Sydney, Australia, July 2022.
3. Defending against Malicious Mixes with Topological Engineering
SICSA'22 PhD Conference,
Glasgow, UK, June 2022.
4. Bow-Tie: Towards Secure Mix Network Topological Construction Algorithm
REPHRAIN All-Hands Meeting Poster Session, **Best Poster Award**
Bristol, UK, March 2022.

TEACHING

| | |
|---|----------------------|
| Computer Communications and Networks | Fall 2024 |
| Computer Security | Fall 2021, Fall 2022 |

STUDENT SCHOLARSHIP

| | |
|------------|---|
| JUNE. 2026 | IREF Diversity Travel Grant, USD 1,625 |
| JUNE. 2023 | PoPETS Stipend, USD 1,610 |
| MAR. 2022 | SICSA Research Travel Funding, GBP 500 |
| MAR. 2021 | University of Edinburgh Doctoral College Scholarship, GBP 66K |
| OCT. 2017 | First Class Graduate Freshmen Scholarship, CNY 20,000 |

SELECTED AWARDS AND HONOURS

| | |
|-----------|---|
| AUG. 2020 | First Prize of Jiangsu Province 'Internet Plus' Innovation and Entrepreneurship Competition |
| DEC. 2017 | Second Prize of Information Security and Countermeasures Contest |
